Bronze Stevie® Award Best Use of Customer Insight 2021

Tales Abdo

Lead UX Designer | NN/g Interaction Specialist
São Paulo, Brazil

Summary

With over 7 years of experience in UX and Product Design along with a background in development, I have a combination of analytical skills and design perspective, allowing me to understand and execute projects from conception to completion. I excel at driving user-centric transformations that address complex, specialized business needs, coordinating design projects, and working with multinational, cross-functional teams. My background in development enables me to design attractive, yet feasible solutions that meet business goals and enhance user experience.I coordinated the design team of 6 generalist designers responsible for IBM's global hardware sales process transformation, enhancing the IT landscape by integrating user experience, business value, and technical excellence for a seamless unified operation, backed by user-centered design. This successful transformation was recognized with two Bronze Stevie Awards for Best Use of Customer Insight and Sales Collaboration Solutions.At Rivian, I led all design aspects from conception to adoption of 8 high-density data applications to support electrical engineers, enhancing efficiency and usability, reducing human error, and applying the Rivian design system to all applications. I collaborated with international teams from the USA, India, and Europe, delivering daily assets and providing weekly updates to stakeholders. Additionally, I led the unification of the Engineering IT application landscape, successfully promoting the initiative in collaboration with the project's product owner.As an advocate of the growth mindset, I am dedicated to continuous learning to keep pace with the rapidly evolving IT industry. I consistently update myself on the latest technologies and market trends to ensure my skills stay at the cutting edge. As a designer, I work closely with clients and stakeholders, managers, product owners, architects, and developers to understand the project and the process, conduct user research, create personas, process flows, wireframes, low to high-fidelity prototypes using Figma and Adobe XD, and gather requirements to write user stories using tools like Jira.

Experience

AgileEngine
Lead UX Designer
November 2024 - Present (1 year 11 months)

Top-ranking software development company AgileEngine is a team of 300+ people ranked among the best software developers in DC, Argentina, and Ukraine. Shaking up big brands and propelling startups to the next level is how we do our job!

The company’s portfolio includes 70+ products developed for industry-leading brands. Apple App Store, Google Play, and Facebook Showcase featured the apps we've built.

Started working on a project that allows users to manage and apply for grants, accelerating the entire process by leveraging AI capabilities and reducing human effort and errors.

Key points:
- Planned the design estimation for the project and aligned the design work with the development and AI teams.
- Mapped the user journey and user flow for different personas and jobs to be done, and created the information architecture mapping.
- Conducted user interviews to validate design ideas, gather feedback, and generate requirements, then summarized user feedback to create new requirements.
- Designed wireframes to test different concepts and solutions, followed by designing high-fidelity mockups and prototypes to visualize and refine the design.
- Created design documentation, including all details, decisions, and data related to the proposed design.
- Presented daily updates to the internal team and weekly updates to the client, keeping all stakeholders informed and aligned throughout the process.

Rivian
Senior Product Designer
April 2023 - July 2024 (1 year 4 months)

In a challenging, fast-paced environment at Rivian, an American electric vehicle manufacturer worth more than $14 billion with over 10,000 employees,

I worked remotely as a senior product designer, focusing on efficient design balancing user needs with development feasibility for complex, high-density data applications.

I worked with all design aspects, including UX, UI, UX writing, information architecture, user research, and UX project management, maintaining quality and consistency across the entire landscape, and ensuring an aligned experience across many applications.

Key points:
- Designed for 8 high-density data applications, delivering daily and bi-weekly updates to multiple stakeholders.
- Worked on design scope and user journey definition, assisting in the creation of 5 supply chain applications.
- Gathered user feedback for improvements, enhancing the experience for 3,000+ users.
- Managed my work using Jira and aligning with POs on prioritization and deliveries, consistently delivering daily assets for 8 applications and general cases.
- Aligned components and assets with other designers, guaranteeing the use of the Rivian Design System.
- Led the design transformation project on internal Rivian applications for the electric engineering team, producing 200+ mockups distributed among 5 iterations.

IBM

5 years

Design Coordinator

September 2020 - March 2023 (2 years 7 months)
São Paulo, São Paulo, Brazil

I worked as Design Coordinator on IBM's global hardware sales process transformation, aimed at streamlining the IBM Hardware CPQ process, from configuration to pricing and ordering. As a Design Coordinator on this project, I was involved in the design process for more than 10 internal and B2B applications used by over 7,000 internal employees and business partners. Any additional friction could potentially delay the entire sales chain, especially at the end of quarters; therefore, these applications focused on efficiency, as users would use them daily for multiple sales.

Key points:
- Gathered requirements from all development teams, successfully coordinating the work capacity of 5 other designers across more than 10 applications.
- Prioritized tasks and managed backlog to ensure high quality and optimized deliveries, ensuring the design process was respected and wasn't a bottleneck in the product chain.
- Created diverse user research activities and assets to gather feedback and metrics on user satisfaction, using them to advocate for users in strategic decisions with clients and stakeholders.
- Mentored young designers, with 1 of them later becoming part of the design team.

User Experience Designer

September 2019 - March 2023 (3 years 7 months)

Brazil

At IBM, a global technology company known for computer hardware, software, and artificial intelligence, worth more than $174 billion with over 345,000 employees, I started as part of an international cross-functional team, where I collaborated closely with a design leader to address requirements from multiple development teams to unify the user experience across all program applications inside IBM's global hardware sales process. The objective was to transition to a single, connected process focused on a unified, seamless experience. As a UX Designer, I produced mockups, led discovery meetings, user interviews, and key decisions about the user journey, benchmarked similar market applications, and analyzed and improved existing applications and business processes.

Key points:
- Collaborated from discovery to execution on projects that generated results such as increased user adoption, a 20% reduction in sales cycle time, and a 30% reduction in support tickets.
- Gathered and translated business requirements into high-quality deliverables such as user flows, wireframes, and Figma prototypes with more than 200 screens across more than 5 applications, always working with agile methodologies such as Scrum or Kanban.
- Initiated and facilitated discovery meetings and demonstrations for stakeholders, aligning all involved on the design process status, standardizing about 10 processes, and helping automate 2 manual processes.

- Conducted extensive research and testing, gathering metrics and user insights to make intelligent design choices and changing applications' NPS from detractors to promoters.
- Evaluated experience and usability from multiple applications, gathering requirements and creating reports to decide the design strategy.

Web Development/Design Intern
April 2018 - September 2019 (1 year 6 months)
Brazil

Worked in web development (front-end and back-end) and as a UX Designer within an Agile team, supporting multiple B2B applications created to assist employees with their IBM Hardware Orders tasks.

Used some top technologies then, such as Vue, React, Node.js, Sass, SQL, GitHub, and Docker. Worked with some concepts such as Blue/Green deployment and TDD.

Pró-Reitoria de Pesquisa - Unicamp
Undergraduate Student Researcher
August 2017 - July 2018 (1 year)
Campinas, São Paulo, Brazil

Research seeking applications and algorithms to aid in the comparison of conceptual maps.

Education

Pontifícia Universidade Católica do Rio Grande do Sul
Postgraduate Degree, User Experience Design and Beyond · (November 2024 - October 2025)

Universidade Estadual de Campinas
Bachelor Degree, Information System · (March 2015 - October 2019)

ETEC - Escola Técnica Estadual de São Paulo
Technical Course, Computing · (January 2013 - June 2014)
